EXPERIENCE

Business Analyst / UX Designer, BCM Ltd.

November 2014 - present

Business Analyst

- creating detailed business (BRD) and functional/technical (TRS) specifications for new business demands and improvements for existing ones based on the Customer requirements
- analyzing complex business demands and translating/simplifying the requirements
- discussing the project details via workshops, phone calls, e-mails or in personal with the Customer
- creating and discussing specifications with 3rd party vendors (e.g. interface specifications)
- documentation change management (versions, track changes, etc.)
- creating GUI specifications and prototypes
- presenting the prototypes to the Customer and discover possible inconveniences before the development phase
- discussing the technical details (IT infrastructure, technology, etc) with the developers and with the IT architects
- presenting specification and requirements to developers and testers
- creating user acceptance tests
- review test cases, support the testing of complex functionalities, participate in testing
- analyzing and prioritizing issues which were reported by the Customer
- prioritizing my current tasks and the tasks of the development team
- exploring possible risks (dependencies, resources, etc)
- working closely with the project stakeholders and translate their requirements for the developers
- holding presentations and trainings of the new developments for the Customer and for the key users, stakeholders
- acting as a communication conduit between the stakeholders and the team
- keeping the focus on the Customer requirements during the development phase
- translating technical issues and discuss them with the stakeholders
- identifying, collecting and analysing future business requirements
- keeping contact with the Customers

UX Designer

- Using UX methodologies and techniques through the specification phase
 - o identifying the "pain points" when an existing function should be updated – interviews/workshops
 - o identifying user flows
 - o task analysis
 - o creating sitemap
 - o creating use cases and scenarios
- creating wireframes and/or mockups/prototypes (with Axure - clickable, paper sketches)
- discussing the details with the Customer – research, user journeys
- presenting our solution for the Customer about their needs regularly

Beside all the above mentioned

- working together with the developers
- supporting developers and/or the Customer through the development phase

Experienced in: Axure, UML, BPMN, Visio, SCRUM, HTML, CSS, JS, ASP.NET, VS 201x, MS SQL

ADDITIONAL PERSONAL INFORMATION

Date of birth: April 18, 1981

LinedIn: <http://hu.linkedin.com/in/nemesbalazs>

Web: <http://astrotoolkit.com> , <http://nemesbalazs.hu>

PERSONAL INTERESTS

I like to create and design applications regarding astrology (desktop, web, mobile) for those who are professionals or beginners in my spare time.

Beside this I like to read (*regarding to software development, UX, marketing, sales, psychology*) and create printing solutions (Chinese Astrology pocket calendars and textbooks).

I like to attend self-knowledge trainings. I like gardening, motorbiking – but mainly relaxing and re-charging myself in my spare time.
